PROFESSIONAL SUMMARY

Full-Stack Software Engineer who independently owns the entire delivery lifecycle — architecture, implementation, testing, and deployment — for secure, production-oriented systems built with TypeScript across React/Next.js frontends, Node.js/Express APIs, PostgreSQL, and deployment infrastructure. Solo-architected and shipped a multi-tenant recruitment platform — 101 API endpoints, 82 frontend routes, 5 RBAC portals — with authentication, background workers, containerized CI, and load testing designed in from the start. Security practices reinforced by a Google Cybersecurity Professional Certificate and applied through Argon2id hashing, JWT rotation, RBAC middleware, and authorization test suites across the full stack.

TECHNICAL SKILLS

Full-Stack Core: TypeScript, React 19, Next.js 15 (App Router, Server Components), Node.js, Express 5, PostgreSQL, Prisma ORM, Vite

Frontend: React 19, Next.js 15, Tailwind CSS v4, TanStack Query, Zustand, Radix UI, React Hook Form + Zod, React Native + Expo

Backend: Node.js, Express 5, REST API Design, JWT Authentication & Authorization, BullMQ (Async Job Queues), Prisma ORM, Swagger/OpenAPI

Databases: PostgreSQL, Redis, Supabase, Database Schema Design

Security: Argon2id Password Hashing, JWT Rotation + Family Revocation, Role-Based Access Control (RBAC), httpOnly Refresh Cookies, Redis-Backed Rate Limiting, Zod Input Validation, Helmet HTTP Headers, DOMPurify XSS Prevention

Testing & Quality: Jest + Supertest, Vitest, Playwright (E2E), MSW (API Mocking), k6 (Load Testing), autocannon (Benchmarking), npm Audit (Security Gate)

Infrastructure & DevOps: Docker + Docker Compose, GitHub Actions (CI/CD), Vercel, Netlify, Sentry (Error Tracking), Winston (Structured Logging)

ENGINEERING PROJECTS

PostBoard — Full-Stack Multi-Tenant Recruitment Platform

Apr 2026 – Aug 2026 | Live: postboard-ruby.vercel.app

React 19 · Express 5 · PostgreSQL · Redis · Prisma ORM · BullMQ · Docker · GitHub Actions

- Architected five isolated role portals (Candidate, Recruiter, Company, Admin, Super-Admin) served by one versioned REST API with 101 endpoints, 82 frontend routes, and 17 PostgreSQL models — each actor sees only its own data surface.
- Implemented dual-entity JWT signing where Users and Companies hold separate signing keys, paired with Argon2id password hashing and refresh-token family rotation that revokes entire token families on reuse.
- Built a backend test suite of 34 Jest suites (~7,230 LOC) covering auth, IDOR, and authorization flows, with Playwright E2E tests across critical user journeys and k6 load-test scenarios for auth, jobs, and applications.
- Containerized the full stack with Docker Compose (API, worker, Postgres, Redis) with health checks; GitHub Actions CI spins up real Postgres and Redis to run unit, integration, E2E, and security-gated test suites.

Cyber Gadget — Production E-Commerce Store

May 2025 – Dec 2025 | Live: cyber-gadget-v2.vercel.app

Next.js 15 · React 19 · TypeScript · Tailwind CSS v4 · Supabase (PostgreSQL) · Framer Motion · Radix UI

- Built a full-stack electronics store with 200+ products using Next.js App Router — Server Components for the initial catalog load, Client Components for filtering, cart, and checkout interactions.
- Designed a normalized Supabase PostgreSQL schema for products, users, orders, and reviews; implemented URL-persisted multi-parameter filters via useSearchParams so filter state survives refresh and sharing.
- Delivered a 3-step checkout with Luhn card validation, ARIA live regions for screen-reader accessibility, and field-level touch tracking across four context-per-concern providers (Auth, Cart, Wishlist, Toast).

TaskFlow — Cross-Platform Mobile Task Manager

Mar 2026 – Jun 2026

React Native · Expo · Express 5 · Prisma · SQLite · Zustand · Zod

- Built a cross-platform (iOS, Android, web) task manager with a single TypeScript codebase using Expo Router for file-based navigation across all three platforms.
- Implemented httpOnly refresh cookies with in-memory access tokens — the access token is never persisted to device storage; sessions restore silently from the cookie on cold start.
- Designed optimistic task-status updates where tapping a status updates UI immediately and calls the API in the background, reverting automatically on failure to eliminate network latency from the critical path.
- Shared Zod validation schemas between client and server to prevent type drift, with six accent themes persisted server-side so they follow the user across reinstalls.

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Coursera, Completed Jun 2026

Network Security, Linux & SQL, Vulnerability Management, Incident Response, Python Automation

The Frontend Developer Career Path — Scrimba, Completed Nov 2023

HTML5, CSS3, JavaScript ES6+, React, Responsive Design, API Integration, Production Deployment

EDUCATION

Federal University of Technology Akure (FUTA)

B.Tech, Building Construction Technology | Sept 2014 – Dec 2021 | Akure, Nigeria

NYSC Completed Feb 2023
